Portfolio: yasser-ten.vercel.app | LinkedIn | GitHub

Summary

Master's student in Applied Image and Signal Processing, looking for an internship in AI, computer vision, data science or web development. Trained a real-time detection model reaching 0.934 mAP@50 (paper under review), and bring two and a half years of professional and freelance experience building web applications and AI automations.

Education

Joint Master's in Applied Image and Signal Processing *Sep 2026 – Present*
FH Salzburg & University of Salzburg Salzburg, Austria
Computer vision, machine learning, image and signal processing, data analysis.

Master's in Computer Engineering, IGEE, Algeria Sep 2024 – Jun 2026

Bachelor's in Electrical and Electronics Engineering, IGEE, Algeria Sep 2021 – Jun 2024

Experience

Front-End & Automation Developer *Feb 2024 – Sep 2026*
DevFlows — AI & Automation Agency Paris, France (remote)

- Built AI-powered automations with n8n, Make and Python/JavaScript scripts, including LLM integrations, that replaced manual client workflows.
- Developed web apps in React.js, Next.js and TypeScript and sites in Webflow and WeWeb; built Xano and Supabase (PostgreSQL) backends with REST API integrations.
- Built new pages of the agency website, working weekly with the SEO specialist and the design team, and automated content creation.

Freelance Web Developer *Dec 2022 – Present*
Clients in France and Algeria Remote
Built tera-hertz.fr from scratch in Webflow (CMS blog, order handling automated with Make); WordPress work on cecileinparis.fr and papalunettes.com.

Workshop Manager & Teacher *Dec 2022 – Jun 2025*
Inelectronics Student Club (ISC) Boumerdes, Algeria
Taught IoT programming, robotics and web development to 200+ students and mentored them in building real-world projects.

Selected Projects

SafeRoad — YOLOv8 Driver Safety Detection *Python, PyTorch, YOLOv8, OpenCV*

- Real-time model detecting a missing seatbelt and phone use while driving (**0.934 mAP@50**); merged and cleaned several public datasets and benchmarked variants on precision, recall and mAP. IEEE-format paper under review.

AI Document Pipeline *Python, FastAPI, vision LLM, OpenCV*

- Turns scanned exam PDFs into structured LaTeX using a vision LLM and OpenCV figure cropping (GitHub).

Agon — AI-Powered Nutrition Platform *WeWeb, Xano, n8n, LLMs*

- AI generates and adapts personal meal plans, with an AI chat and trend dashboards (GitHub).

Solar EMS — IoT Energy Monitoring *ESP32, C++, Firebase, JavaScript*

- Real-time solar micro-grid data streamed every 2 s to a live dashboard (GitHub).

Also: autonomous maze-solving robot with PID control, **4th of 48 teams**; full-stack business management app (Next.js, Supabase); more on my portfolio.

Skills & Languages

AI & Data: Python, PyTorch, YOLOv8, OpenCV, scikit-learn, pandas, NumPy, Matplotlib, MATLAB, LLM APIs
Web: React.js, Next.js, TypeScript, JavaScript, HTML/CSS, FastAPI, Node.js, Webflow, WordPress, WeWeb
Data & Automation: SQL, PostgreSQL, Supabase, Firebase, REST APIs, n8n, Make, Git
Spoken: English (C1), French (B2), German (A2, currently taking a course), Arabic (native)
